THE NEXT GENERATION OF SOCIAL MEDIA IS HERE

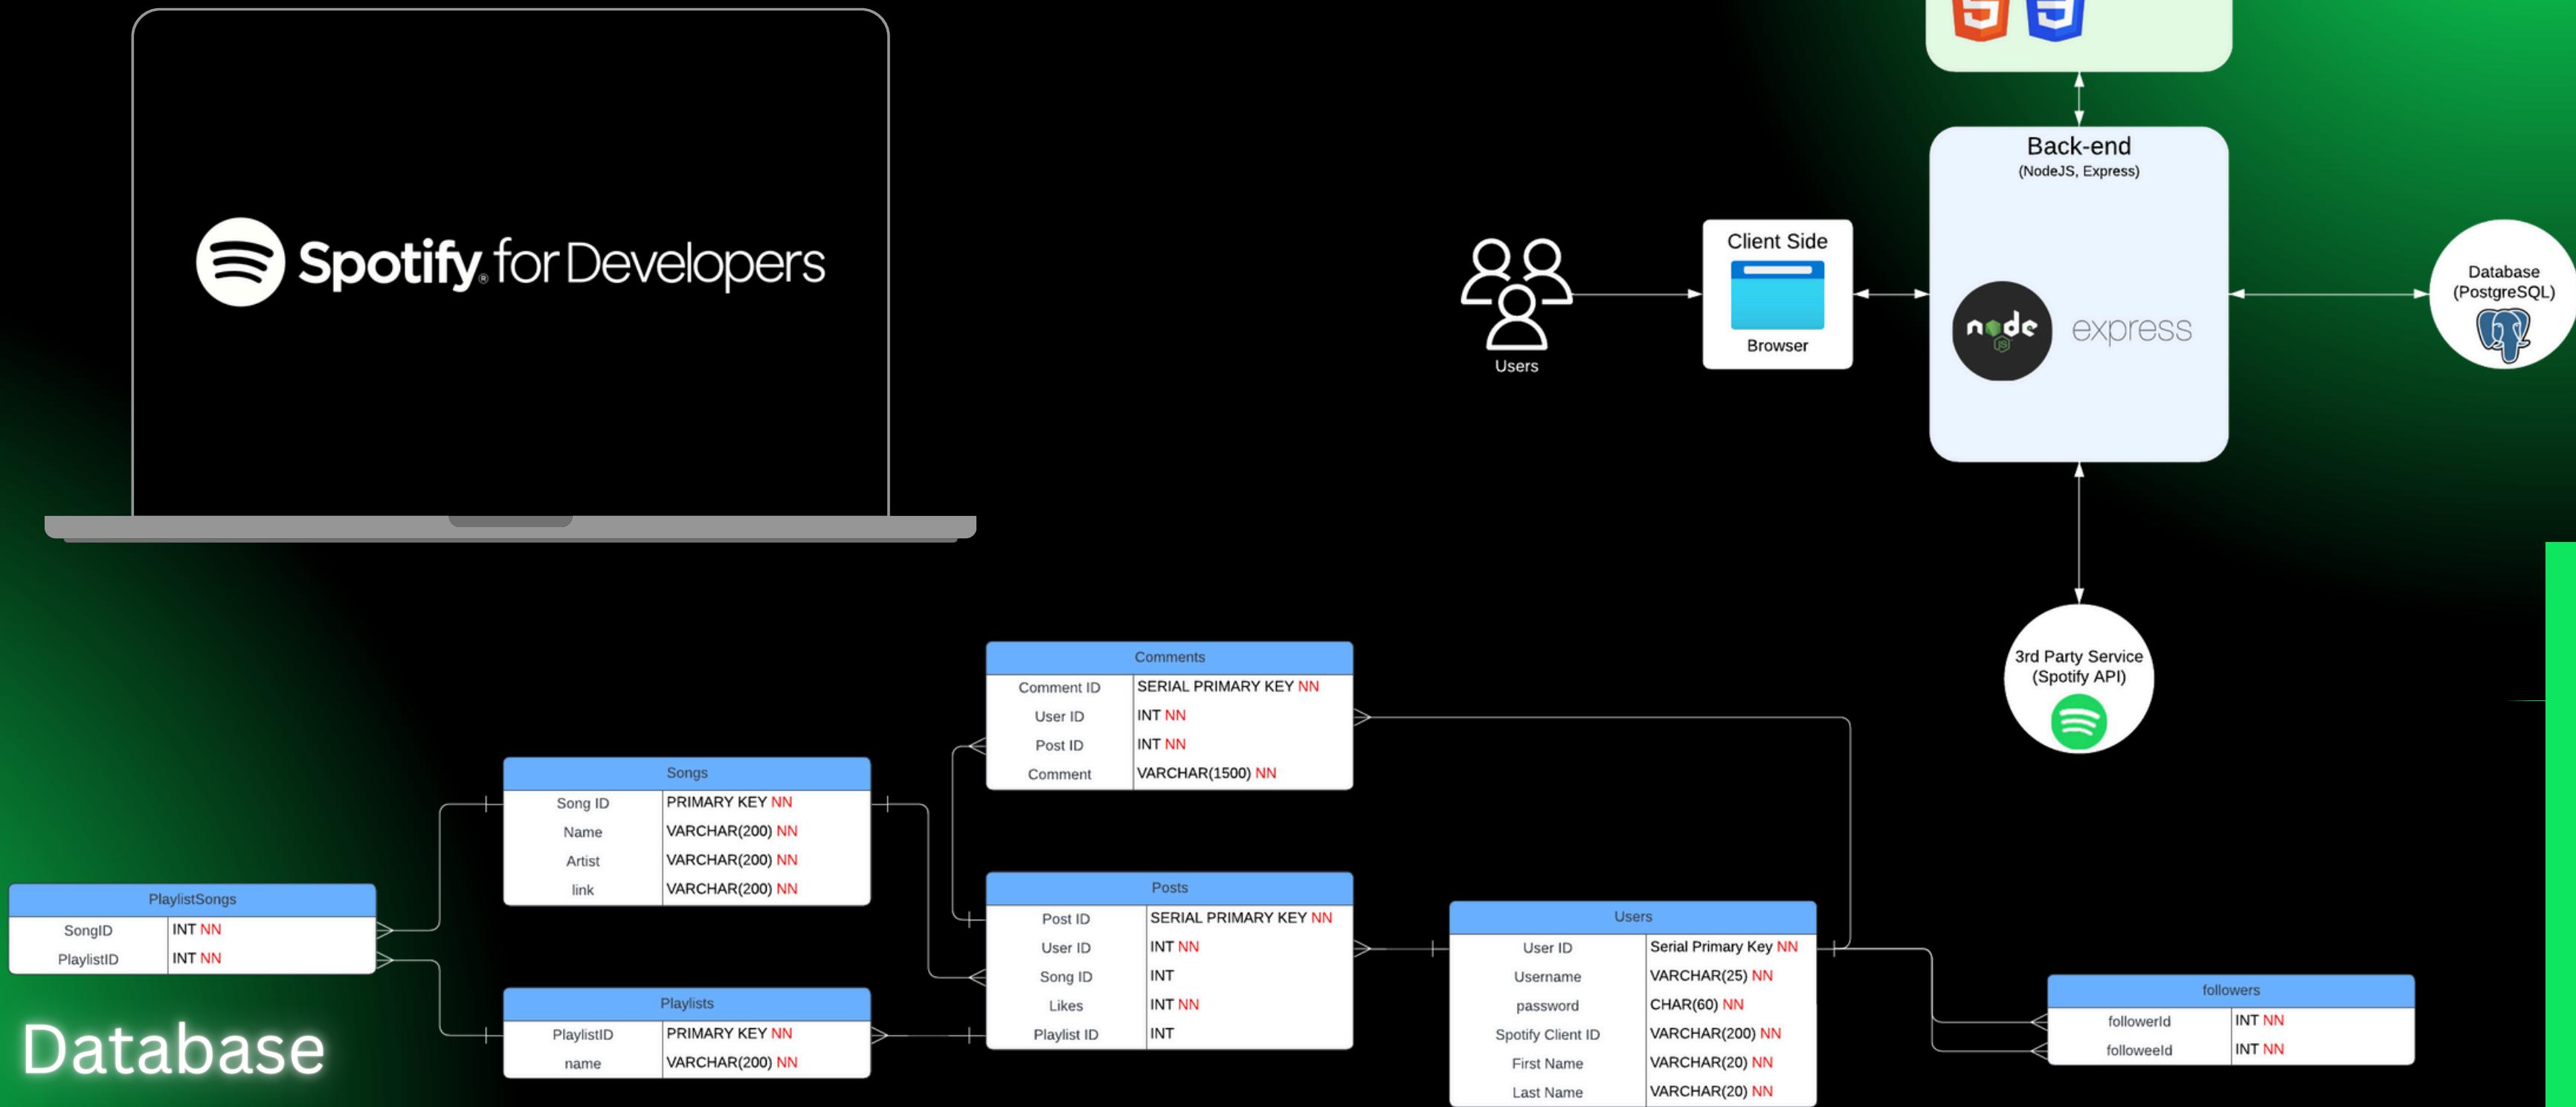

Discover a new way to connect through music with our app that let your favorite songs spark meaningful connections. Share your top tracks on your profile, request friends to check out a song, and find like-minded users based on shared tastes in genres and artists. Whether you're vibing over mutual favorites, debating hits with 'like' or 'dislike,' or expanding your library with personalized song recommendations, our platform turns music sharing into a social experience. It's not just about the music you listen to—it's about the connections it creates. Let's make sharing songs a way to find your people!

Tools

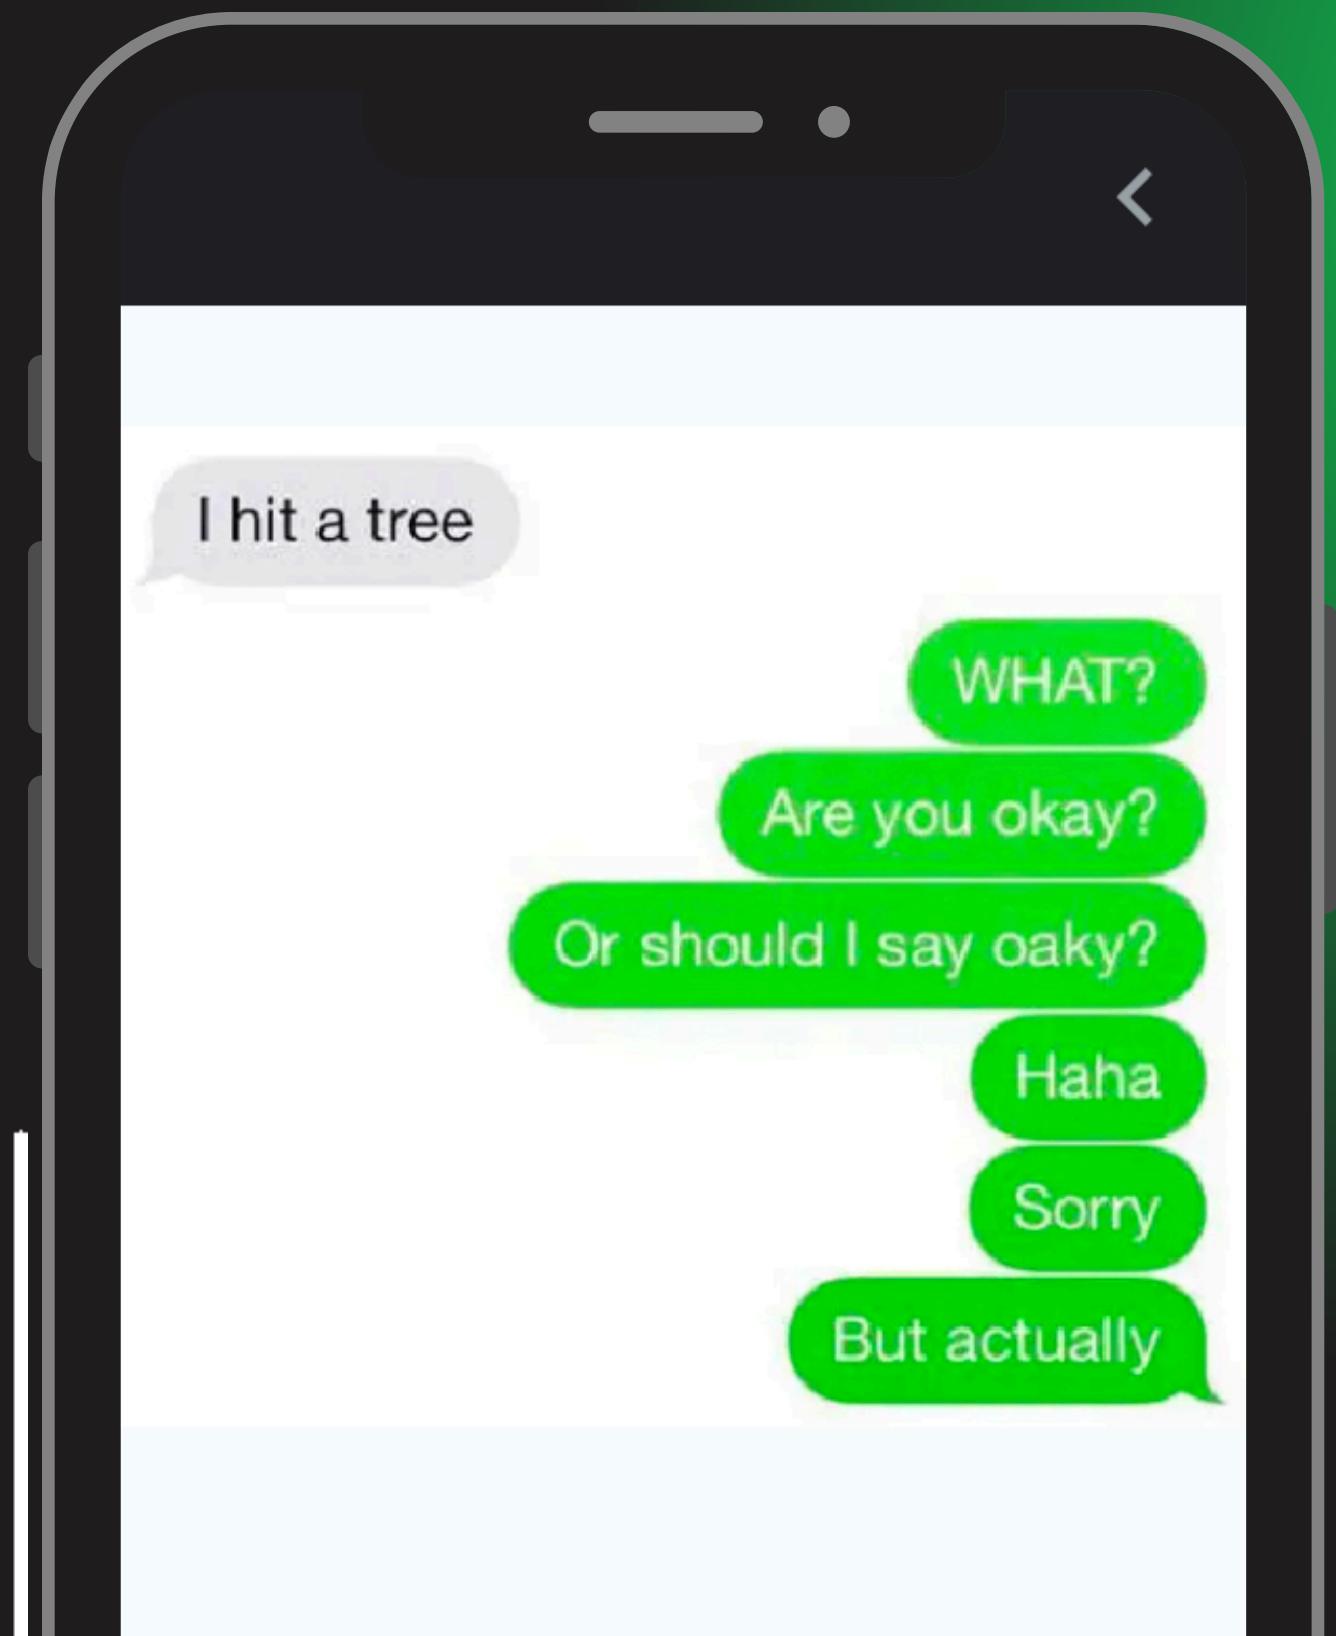

Architecture

Future Improvements

1. A feed that will introduce new styles/genres of music
2. Direct Messaging with friends or other users
3. Search bar for looking up friends
4. Sharing/posting playlists
5. Liking and disliking posts
6. Change profile settings
7. Listen to songs in app

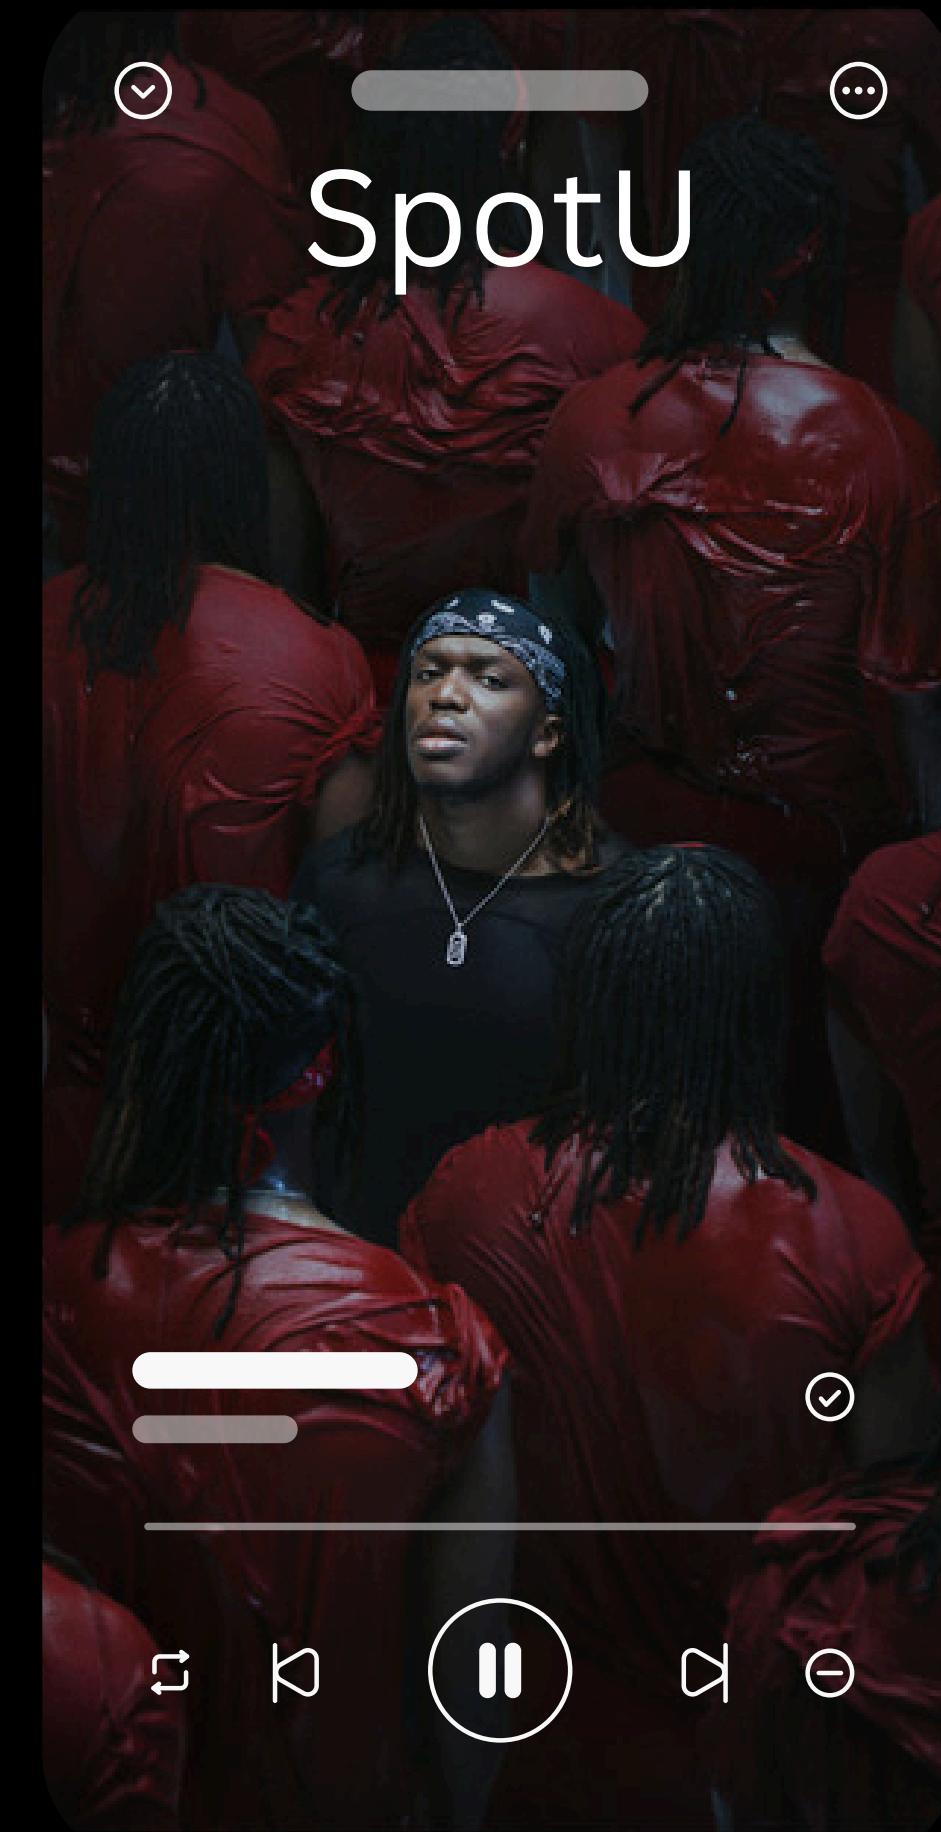

Challenges

**Spotify Developer API - OAuth2 Control Flow, and
“Developer Mode” restrictions**

**User Control - Authentication, User interaction,
Posts and Comments**
