- **Application Name**
  - Song Request
- **Application Description**
  - Social media application that allows users to match with other users based on posted playlists. Users will be able to post playlists to the application, and based off the posted playlists, it will generate similar users based on categories such as genre and artists.
  - Each user will have a profile where they can post their favorite songs and playlists, and requests for their friends to listen to certain songs. From their the friends can like or dislike a certain song.
- **Vision Statement**

- ○ Connecting people with their love of music, verse by verse, note by note.
- **Communication Plan**
  - ○ The team will use discord to keep track of progress and communicate through this project
- **Meeting Plan**
  - ○ TA Meeting
    - ■ Monday, 5:30-5:45 pm on Zoom
  - ○ Team Meeting
    - ■ Monday 4-6 either on discord or in person depending on the week
- **Development and Methodology**
  - ○ We will use Trello
- **Use Case Diagram**

- **Wireframes**
